

Clustering in R

Optimal Number of Clusters: Gap Statistic

```
# Step 1: Prepare data properly
data <- USArrests
data <- na.omit(data)
data <- scale(data)
data <- as.data.frame(data) # Ensure it's a data frame

# Step 2: Use gap_stat method (requires set.seed)
set.seed(123)
fviz_nbclust(data, kmeans, method = "gap_stat")
```
